Workshop on AI and ML (7th Dec, 2022)

AI (Artificial Intelligence) and ML (Machine Learning) are transformative technologies that have gained significant attention and practical applications in recent years. AI refers to the development of computer systems capable of performing tasks that typically require human intelligence, such as problem-solving, decision-making, and natural language processing. ML, a subset of AI, involves training algorithms to learn from data and improve their performance over time without explicit programming. These technologies have revolutionized various industries, including healthcare, finance, transportation, and entertainment. They enable intelligent automation, predictive analytics, personalized recommendations, and more. With ongoing advancements, AI and ML have the potential to drive innovation, enhance productivity, and shape the future of society in remarkable ways. The Eureka Prize Problems society, under the mentorship of Dr. Souvik Ganguli and Dr. Amit Kumar organized the online workshop on AI and ML on 7th Dec, 2022 in association with Pantech e Learning. The program link is shared for reference:
